

1921 Distribution Box

AI Overview

The 1921 Distribution Box is an electrical enclosure designed to safely distribute power from primary sources to multiple devices, housing components like circuit breakers, terminals, and busbars. Overview and Purpose The 1921 Distribution Box is an enclosure that protects and organizes electrical components such as switches, circuit breakers, fuseholders, connectors, terminals, resistors, capacitors, and transformers. Its primary function is to distribute electrical power from one or more primary sources, such as generators or batteries, to various electrical or electronic devices, ensuring safe and efficient power management. It may include a cover or door for protection and accessibility. Key Features Component Housing: Designed to mount and protect electrical devices including mini circuit breakers, jacks, and terminal boards. Busbar Integration: Many models, such as the Akari ADB-FG1921, include a common busbar for organized power distribution and labeling. IP Rating: Typically rated IP30, suitable for indoor use but not for outdoor environments.

.Material: Often constructed with steel or metal bases for durability and safety

.Compatibility: Supports standard electrical components and is compatible with mini circuit breakers and grounding terminals. Applications The 1921 Distribution Box is

suitable for residential, commercial, and light industrial applications, providing a centralized point for power distribution. It ensures regulated flow of electricity, reduces the risk of overloads, and simplifies maintenance and troubleshooting. It can be used in conjunction with power distribution units (PDUs) for larger setups. Variants and Related Equipment Circuit Breaker Boxes: If the enclosure primarily contains circuit breakers or switches, it may be classified separately. Junction Boxes: Empty boxes designed for mounting without pre-installed devices. Interconnecting Boxes: For connecting multiple electrical or electronic items, excluding primary power sources.
