Note: Please connect the positive and negative poles correctly when using □Maximum. Our flexible distribution boxes enable reliable, decentralized signal transmission and power transmission up to protection class IP67 – wherever passive distribution boxes are required. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The Fuse Box is an older type of distribution panel that uses fuses instead of circuit breakers to protect electrical circuits. Each fuse is designed to blow when the current exceeds a certain limit, thereby cutting off the power to prevent damage.
