

Cable tray elbow with holes

Overview

A perforated cable tray system is a comprehensive cable management solution that utilizes a tray with holes (perforations) in the base to allow for ventilation and drainage, while still supporting cables securely. Compared with channel cable. Metal elbows for cable trays are specialized components designed for electrical installations, allowing for efficient and safe routing of cable pathways at corners. These elbows are made from sturdy metal, ensuring long-lasting use and reliable protection against mechanical damage, corrosion, and. ♦ PCT50×100-ELB90, PCT stands for cable trunking, ELB90 stands for 90° horizontal elbow, 50×100 stands for height 50mm × width 100mm (outer dimension). ♦ Ventilation holes in the picture only for reference, the real hole pattern should be in accordance with the drawing. Manufactured from high-quality GI, Hot Dip Galvanized, Powder Coated, and Stainless Steel materials. Available in multiple configurations ensures durability in harsh environments. Cut, bend, and connect the wire mesh trays.
