

Cable tray internal connection piece

AI Overview

Cable tray connecting pieces are essential components that join sections of cable trays, ensuring stability, safety, and proper cable routing. Purpose and Function Cable tray connecting pieces, also known as splice plates, brackets, or fittings, are used to securely join two or more sections of a cable tray system. They maintain system stability, prevent sagging, and ensure that cables remain safely supported. Proper connections also facilitate easy maintenance, compliance with electrical codes, and long-term durability of the cable management system.

Types of Connecting Pieces

- Splice Plates and Bolted Connections:** Flat metal plates with pre-drilled holes are bolted to the ends of two tray sections. They provide a strong, secure, and reliable connection suitable for straight runs and heavy cable loads.
- Quick Connect Systems:** These are proprietary systems that snap, slide, or twist together, requiring minimal tools and installation time. They are ideal for large projects where speed is important but may be brand-specific.
- Angle and Junction Fittings:** L-shaped, T-shaped, or cross-shaped plates allow directional changes in the cable tray system, such as corners, splits, or crossovers.
- Clamps and Brackets:** Used to secure trays to support structures or to join sections internally, ensuring alignment and load distribution.

Materials Connecting pieces are typically made from galvanized steel, stainless steel, aluminum alloy, or fiberglass-reinforced plastic (FRP). The choice of material depends on environmental conditions, load requirements, and corrosion resistance needs.

Installation Considerations

- Fasteners:** Bolts, nuts, and screws are commonly used to secure splice plates and brackets. Torque wrenches or spanners may be required for proper tightening.
- Alignment:** Ensuring that tray sections are level and properly aligned is critical to prevent stress on cables and maintain system integrity.
- Accessibility:** Connections should allow for future maintenance, such as adding or rerouting cables, without dismantling the entire system.
