

Can a single strand be used for the grounding wire of a distribution box

Overview

(a) A single wire-type equipment grounding conductor – sized per Section 250. 122 – may be installed if the circuit conductors are connected in parallel in a single raceway, auxiliary gutter, or cable tray. 122 displays the minimum conductor size for grounding raceways and equipment based on the ampere rating or setting of the circuit's overcurrent protective device. The rules for sizing wire-type equipment grounding conductors –. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity. The main electrical ground bar (MEGB) is used as the hub of the grounding network to the building.
