

Complete household surface-mounted distribution box

AI Overview

A complete household surface-mounted distribution box is a modular, safe, and customizable enclosure for residential electrical distribution, suitable for dry and damp areas with IP40–IP65 protection. Overview A surface-mounted distribution box is designed to house circuit breakers, RCDs, fuses, and other electrical modules for safe power distribution in homes. These boxes are mounted on walls rather than recessed, making them ideal for retrofits, garages, basements, or areas where flush mounting is impractical. They are available in various sizes, typically ranging from 12 to 72 modules, and can be configured with 1 to 5 rows depending on household needs. Key Features Modular Design: Boxes come in 16- or 32-module bases, with horizontal and vertical expandability, allowing customization for different circuits or floors. Materials: Commonly made from polycarbonate (PC) or ABS, providing heat and shock resistance, halogen-free construction, and long-term durability. Protection Class: Standard IP40 for indoor dry areas; IP65 or damp-room variants are available for bathrooms, cellars, or garages, featuring injected rubber seals to prevent moisture ingress. Doors and Covers: Options include transparent or opaque doors, often lockable, with 180° openable covers for easy access and maintenance. Mounting Rails: Equipped with top-hat (DIN) rails for easy installation of circuit breakers, RCDs, and other modules. 1 TE (17.5 mm) typically corresponds to one module. Accessories: PE/N terminals, screw sets, cable glands, and optional double-row or screwless terminal strips are often included for complete installation. Applications Residential Use: Ideal for distributing electricity across rooms, floors, or specific appliances. Damp or Wet Areas: Special damp-room boxes with IP65 protection are suitable for bathrooms, cellars, or outdoor covered areas. Multimedia...
