

Fiber Optic Cable Splice Point Monitoring Solution

Overview

Fiber Monitoring System utilizes Differential GPS (DGPS) and Cable Fault Locator technologies to accurately detect and locate fiber optic cable degradations and cuts. This identifies anomalies and weakening signals that indicate potential damage. FOGrid is Sensor lines' comprehensive and easy to deploy solution to ensure a continuous real-time monitoring of the integrity of buried or overhead cables, whether offshore or onshore. In this case, a light pulse is fed to the fiber cable and from the damping behavior of the reflected light pulse can be concluded on the type of error, also called event. Fiber monitoring refers to the continuous assessment of fiber quality through software tools and equipment that form an integrated optic fiber monitoring and management system. GLSUN's fiber cable monitoring system combines with OTDR, optical switches and network management software to form speedy. ABS offers a complete line of optical splice closures for any application as well as a range of splitters and components. We can save you months of work! Save days and weeks of work — create clean. EXFO's remote fiber testing & monitoring solutions are built based on fixed OTDR test equipment placed at strategic central locations across the network.
