

## Fiber optic cable directly connected to Huawei H6 router

### AI Overview

The Huawei H6 router cannot be directly connected to a fiber optic cable; it requires a fiber optic modem or ONT to interface with the fiber line. How to Connect The Huawei H6 router features a Gigabit WAN port, which is used to connect to the internet source. Fiber optic cables cannot plug directly into the router. Instead, you need a fiber optic modem or Optical Network Terminal (ONT) provided by your ISP. The setup works as follows:

- Fiber Cable to Modem/ONT:** Connect the fiber optic cable from your wall outlet to the designated port on the modem or ONT.
- Modem/ONT to Router:** Use an Ethernet cable to connect the LAN port of the modem/ONT to the WAN port of the Huawei H6 router.
- Power On and Configure:** Power on both the modem/ONT and the router. The Huawei Smart Life app can guide you through the router setup for internet access and Wi-Fi configuration.

**Additional Notes** The Huawei H6 supports Gigabit Ethernet, ensuring high-speed wired connections from the modem to the router. Once connected, the router can distribute internet to multiple devices via its LAN ports or Wi-Fi 6+ network, providing stable coverage across large areas. This setup is standard for fiber-optic internet in homes, as the router itself does not have an SFP or fiber input port. By following this method, your Huawei H6 router can fully utilize a fiber optic internet connection while maintaining high-speed performance and wide coverage.
