

## How far can 10 Gigabit fiber optic multimode transmission reach

### Overview

10 Gbps multimode fiber can typically extend up to 300 meters for standard compliant installations, with modern, high-quality cables capable of reaching up to 400 meters due to advancements in manufacturing processes. With a 200 MHz/km bandwidth, OM1 fiber can transmit up to 275 meters for 1 Gigabit Ethernet and 33 meters for 10 Gigabit Ethernet. However, it is more commonly used for lower-speed applications, such as 100 Megabit Ethernet, in short-distance Ethernet setups like Local Area Networks (LANs) and. The maximum reach of OM2 fiber for 10G applications depends on the specific transceivers used and the quality of the fiber installation. For 10 Gigabit Ethernet over OM2 fiber, the typical reach is up to 82 meters (approximately 269 feet). Modal dispersion, not signal attenuation, is what kills multimode distance. Does WDM technology increase the maximum distance OM3 & OM4 fiber can transmit 10 Gbps?

Yes, using a WDM (Wavelength Division Multiplexing) technology can.
