

How much does a KVM fiber optic transceiver cost in Jordan

AI Overview

KVM fiber optic transceivers in Jordan typically range from \$150 to \$600 per pair, depending on type, distance, and data rate. Price Overview The cost of a KVM fiber optic transceiver depends on several factors, including data rate, transmission distance, connector type, and whether it is single-mode or multi-mode. For example, a 4K HDMI over fiber optic KVM extender with SFP transceivers can cost around \$150–\$300 per pair for single-mode links up to 10 km, as seen in online listings . Higher-end modules, such as 10G SFP+ or QSFP+ transceivers, can range from \$300 to \$600 or more per unit, especially for long-distance or high-bandwidth applications . Factors Affecting Cost Module Type: SFP, SFP+, QSFP, and QSFP28 modules vary in price, with higher-speed modules generally costing more . Transmission Distance: Single-mode modules for long distances (10 km or more) are more expensive than short-range multimode modules . Brand and Vendor: OEM modules are typically more expensive, while third-party or compatible modules can reduce costs by 50–90% . Bulk Orders: Purchasing multiple units often reduces the per-unit cost, and some suppliers offer additional discounts for 10+ pieces . Local Availability: Import duties, shipping, and local distributor pricing in Jordan can increase the final cost compared to online US or EU prices. Practical Considerations For short-range KVM setups (up to 300 m), multimode SFP modules are cost-effective. For long-range setups (up to 10 km), single-mode SFP or SFP+ modules are recommended, with higher prices. Ensure compatibility with your KVM extender and fiber type (LC duplex, MPO/MTP) to avoid additional costs . In summary, for a typical KVM fiber optic setup in Jordan, expect to pay \$150–\$300 per pair for standard 4K HDMI extenders and \$300–\$600 for higher-speed or long-distance transceivers, with prices influenced by module type, distanc...
