

How much does one meter of mesh cable tray cost

AI Overview

The price of one meter of wire mesh (basket) cable tray typically ranges from \$2 to \$25, depending on material, finish, and size. Price Range and Material Factors Wire mesh cable trays are among the most affordable types of cable trays, ideal for lightweight cables such as data or communication lines. The cost per meter varies based on the material: Pre-Galvanized Steel (PG): Most affordable, suitable for dry indoor environments like offices or schools. Hot-Dip Galvanized Steel (HDG): More expensive, ideal for outdoor or industrial areas due to superior corrosion resistance. Aluminum: Lightweight and rust-proof, generally pricier than steel but reduces the need for heavy supports. Stainless Steel: Highest cost, used in hygienic or corrosive environments such as food plants or coastal installations. Additional Cost Considerations The listed price of a straight tray is only part of the total cost. Supports, brackets, bends, tees, and covers can add 20–30% or more to the overall project cost. For outdoor installations, covers are often required, which can nearly double the weight and cost of the tray. Market Pricing According to recent market data, the average price per meter for wire mesh cable trays is: Low-end: Around \$2 per meter for basic pre-galvanized steel trays. High-end: Up to \$25 per meter for stainless steel or specialized aluminum trays with coatings. Bulk orders or project-based pricing can reduce the per-meter cost significantly, especially for large-scale installations. Summary For budgeting purposes, you can expect \$2–\$25 per meter for a wire mesh cable tray, with the final cost influenced by material, finish, size, and additional components like supports and fittings. Pre-galvanized steel is the most economical choice for indoor use, while stainless steel or aluminum is preferred for durability and corrosion resistance in demanding environments.
