

How often should the fiber optic router be restarted

Overview

Ideally, you should reboot them at least once a month to clear out the memory and refresh your connections. But don't confuse “reboot” with “reset”—they're different. A “reboot” simply restarts your router, gateway, or mesh system, while a “reset” restores it to its default. There's no definitive rule for how often you should reboot your standalone router, gateway, or mesh system. However, if you notice any of the problems mentioned earlier, such as slow speeds or dropped connections, rebooting sooner rather than later can. Giving your router a break can do more than just speed up your internet connection, so how often should you reboot it?

We spoke with tech experts to find out. We tend to take our Wi-Fi connection for granted until something goes wrong. Maybe you need to grab a quick address from a website before. It's good practice to restart your modem or router whenever you have any connectivity issues, transfer internet to another address, or update your internet plan. However, there are plenty more reasons to do so. Here's why this 2-minute habit matters.
