

How to set up the fiber optic box and router

AI Overview

To set up fiber optic internet, connect the fiber cable to the ONT, link the ONT to your router via Ethernet, and configure your router with ISP credentials for full-speed internet.

Step 1: Gather Equipment Ensure you have the following:

- Optical Network Terminal (ONT):** Provided by your ISP to convert fiber signals into data.
- Router:** Compatible with fiber input, ideally with gigabit LAN ports.
- Fiber optic cable:** Usually yellow with SC/APC or SC/UPC connectors.
- Ethernet cable:** To connect the ONT to the router.
- Power adapters for both ONT and router.**

Step 2: Install the ONT Locate the fiber wall outlet where the ISP fiber line enters your home. Connect the fiber optic cable from the wall outlet to the ONT's designated port. Plug in the ONT power adapter and wait 2-5 minutes for the status lights to stabilize.

Step 3: Connect the ONT to the Router Use an Ethernet cable to connect the ONT's LAN port to the router's WAN port. Power on the router and wait for the indicator lights to confirm a successful connection.

Step 4: Configure the Router Access the router's admin panel via a web browser (commonly 192.168.1.1). Enter the ISP-provided credentials to establish the internet connection. Update the router firmware if necessary. Set a strong Wi-Fi password and customize the network name (SSID) for security and convenience.

Step 5: Optimize Your Network Place the router in a central location for best Wi-Fi coverage. Use CAT6 or better Ethernet cables for wired connections to critical devices. Enable VLAN or QoS settings if required by your ISP or for prioritizing traffic. Consider Wi-Fi 6 or Wi-Fi 7 routers to fully leverage fiber speeds.

Step 6: Test the Connection Verify internet speed using online speed tests. Ensure all devices can connect to Wi-Fi and wired connections. Check ONT and router lights for proper operation. Following these steps ensures your fiber optic internet is properly installed.
