

Indoor optical distribution box price

AI Overview

Indoor optical distribution boxes typically range from \$15 to \$80 depending on port capacity, material, and features.

Price Overview

4-Port Indoor Fiber Distribution Boxes: These smaller units, suitable for residential or small office FTTH setups, generally cost \$15–\$30. They are compact, wall-mounted, and designed for splicing and termination of SC, LC, or FC fiber cables, often including basic accessories like screws and heat shrinkable sleeves.

12-Port Indoor Fiber Distribution Boxes: Larger units for multi-dwelling units, commercial buildings, or villas typically range from \$50–\$80. These boxes support more adapters, fiber splicing, and may include PLC splitter installation, dual-layer design for cable management, and IP65-rated protection for indoor/outdoor use.

High-Density or Custom Boxes: For 16, 24, or higher port capacities, prices can exceed \$100, depending on features like splitter support, material quality, and additional cable management options.

Factors Affecting Price

Port Capacity: More ports increase cost due to larger size and additional components.

Material Quality: High-quality plastics with UV and impact resistance are more expensive.

Features: Waterproofing, dual-layer design, and splitter compatibility add to the price.

Brand and Supplier: Prices vary between manufacturers and online marketplaces like Amazon or specialized suppliers.

Accessories Included: Some boxes include pigtails, adapters, or mounting hardware, which can affect cost.

Buying Tips

For residential FTTH installations, a 4-port indoor box is usually sufficient. For commercial or multi-unit buildings, consider 12-port or higher boxes with splitter support. Check for warranty and delivery options, as some suppliers offer 1–2 years warranty and free samples for quality testing. By considering port capacity, material, and additional features, you can select an indoor optical distribution box that fits both your technical requirements and budget.
