

Installation of Taitou Distribution Box

AI Overview

The Taitou distribution box should be installed on a stable, dry, and accessible surface, with proper grounding, secure wiring, and adherence to safety standards.

Site Selection and Preparation Choose a location that is dry, well-ventilated, and easily accessible for maintenance. Avoid areas near water, flammable, explosive, or corrosive substances. The box should be close to the main power supply to minimize power loss and facilitate connections. For wall-mounted boxes, the installation height is typically 1.5 to 1.8 meters above the ground for convenient operation and inspection.

Mounting the Distribution Box

Wall-mounted installation: Use expansion bolts to secure the box. For hollow brick or block walls, embed dovetail bolts or use split bolts for stability.

Embedded installation: Ensure the panel is flush with the wall after embedding. Adjust the cabinet or panel for levelness and perpendicularity using sizing blocks if necessary, but no more than three blocks per adjustment.

Foundation mounting: For floor-standing cabinets, place the box on the foundation steel according to construction drawings and fasten with bolts after alignment.

Wiring and Electrical Connections

Power Off: Ensure the main power supply is turned off before wiring.

Wire Preparation: Strip insulation to expose the conductor, leaving an appropriate length for connection.

Circuit Breakers: Install breakers according to load requirements, ensuring each circuit has its own protection device.

Termination: Connect line to line, neutral to neutral, and ground to ground, following color coding standards. Secure wires with screws or wire strippers, ensuring no loose connections.

Cable Management: Route wires neatly, secure with cable ties, and leave space for heat dissipation. Avoid sharp edges and tangling.

Grounding and Safety Connect the PE row in the cabinet to the foundation steel using copper wire, adding a spring washer to prevent loosening. Each cabinet door should be connected to the PE row with a copper braided wire. Ensure all metal parts, including the box, electrical board...
