

Malaysia Plastic Cable Tray Specifications

AI Overview

Plastic cable trays in Malaysia, including PVC and FRP types, are corrosion-resistant, non-conductive, flame-retardant, and suitable for damp or chemically aggressive environments.

Material Types and Properties

PVC Cable Trays Made from corrosion-free PVC, ideal for damp and chemically aggressive environments. Non-conductive, eliminating the need for earthing. Operating temperature range: -20°C to +60°C. Flame retardant with Class M1 fire resistance. High impact resistance up to 20 J, depending on size. Lightweight, easy to handle, cut, perforate, or join, minimizing damage to cables and injury to installers. Available in standard or reinforced versions, with perforated or unperforated bases. Fully recyclable and compliant with the RoHS Directive.

FRP (Fiber Reinforced Polymer) Cable Trays Made using pultrusion, integrating a high percentage of glass for superior strength. Resistant to acids, salts, alkalis, and a wide range of chemicals and solvents. Non-conductive, reducing electrical hazards. Can be drilled or cut on-site using hand tools, lowering installation costs. Fire-retardant grades available, suitable for industrial and corrosive environments.

Design and Types

Perforated trays: Allow airflow to prevent overheating, ideal for data centers and industrial applications.

Ladder trays: Provide robust support for heavy cables in power plants, oil refineries, and large infrastructure projects.

Wire mesh trays: Flexible and adaptable for commercial buildings and telecommunications hubs.

Reinforced or standard bases: Depending on load requirements and installation environment.

Compliance and Environmental Considerations

PVC trays comply with RoHS Directive, ensuring elimination of hazardous substances. Both PVC and FRP trays are non-conductive, reducing electrical risks. FRP trays offer long-term durability in corrosive and UV-exposed environments.

Applications

Industrial plants, power generation facilities, and oil & gas sectors. Data centers, telecommunications hubs, and commercial buildings requiring...
