

Network Security Device Deployment Map

Overview

Place network IDS at perimeters and segment boundaries for broad monitoring. Map your network and identify critical assets before deploying IDS. Network security diagrams help teams spot vulnerabilities, plan controls, and communicate network design clearly. Used by admins, architects, and auditors, they turn complex networks into easy-to-understand visuals. Place IDS for wide. Depending on when you onboarded to the (Legacy) IoT Security, Device Security provides two ways to link devices to sites: IP address-based site assignments – Device Security assigns devices to a site based on device IP address. This method was introduced in March 2022. Network mapping software is primarily used for network documentation, network planning, troubleshooting, and security assessment purposes.
