

Optical module slot type

Overview

Slotted switches, also known as optoelectronic slot sensors or optical switches, are used for various applications that require object detection, position sensing, or interruption detection. These devices consist of an emitter and a receiver placed opposite each other, with a gap. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. Our. The emitter and receiver are set in a U shape to enable easy handling. There are 7 products of Slot-type. Meeting Customer Needs with Ultracompact Sensors that Mount with M3 Screws A Wide Slot Width of 13 mm and Superior Resistance to Light Interference and Noise. Slim, Compact Photomicrosensor. This topic describes the encapsulation types of optical modules on WDM products Small form-factor pluggable (SFP) optical modules are compact, hot-swappable, low-speed optical modules. An SFP interface on networking hardware is a modular slot for a media-specific transceiver, such as for a fiber-optic cable or a copper.
