

## Optical splitter with downward tilt

### Overview

Both 1XN and 2XN splitters can be constructed in this fashion with as many as eight or more outputs, with both low return losses and low insertion losses. This design is extremely flexible, allowing one to use different fiber types on different ports, and different beam splitter. Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in order to minimize ghosting and interference effects. It is a crucial part of many optical experimental and measurement systems, such as interferometers, also finding widespread application in fibre optic telecommunications. T PON standards such as GPON, XGS-PON and new 25 and 50G standards. It is. ©2025 Newport Corporation.
