

## PXT model distribution box

### AI Overview

PXT distribution boxes are surface-mounted electrical distribution cabinets designed for low-voltage AC systems, offering flexible configurations, protection features, and compliance with international standards.

**Overview and Applications**  
The PXT distribution box is widely used in power plants, substations, factories, mines, and high-rise buildings for lighting, power feed, and protection of low-voltage circuits (AC 400V and below) against overload, short circuit, undervoltage, and leakage. It is suitable for frequent switching and low-power lines, making it versatile for industrial and commercial electrical distribution.

**Structural Components**  
A typical PXT distribution box includes:  
 Box body and face cover: The main enclosure, which can be all-plastic, plastic-faced iron bottom, all-steel, or stainless steel.  
 Transparent cover door: Allows visual inspection without opening the box.  
 Installation rail and conductive bars: For mounting circuit breakers and connecting electrical circuits.  
 Incoming line shield and bus baffle: Ensures safe and organized wiring.  
 Neutral line and grounding terminal blocks: For proper earthing and safety.  
 Heat dissipation system: Includes fans, louvres, and dual-layer filters to prevent dust, insects, and moisture from entering, protecting internal electronic devices.

**Model and Specification Interpretation**  
The PXT model series is interpreted as follows:  
 PXT: Surface-mounted distribution box.  
 (R): Optional concealed installation.  
 K: Series of wiring methods.  
 X/X: Rated current / short-time withstand current (e.g., 250/10 indicates 250A rated current and 10kA short-time withstand current).  
 IPX: Protection level against dust and water ingress. This allows customization according to user requirements, including rated current, installation type, and environmental protection.

**Standards and Compliance**  
PXT distribution boxes comply with IEC60439-1 and GB7251.3 standards, ensuring safety, reliability, and compatibility with modern electrical systems. They are designed for high space utilization, stable operation, and environmental protection...
