

Precautions for laying invisible optical cables

Overview

WARNING: To minimize hazards to yourself and others in or near the work area, follow all company rules for setting up barricades, ladders, scaffolding, and warning signs. Any material used above the floor should be arranged so that it cannot fall and hit individuals underneath. The development of science and technology has put forward higher and newer. Eye Safety Optical sources used in fiber optics, especially LEDs used in premises networks, are of much lower power levels than used for laser surgery or cutting materials. Even the output of OTDRs, WDM and fiber amplifier systems, which are much higher than LED systems, are still well below that.

CAUTION: Before starting any cable installation, all personnel must be thoroughly familiar with all applicable Occupational Safety and Health Act (OSHA) regulations, the National Electric Safety Code (NESC), state and local regulations, and company practices and policies. 6 mm flat transparent drop cable. It heats the hot-melt adhesive on the surface of an optical cable, passes the optical cable through a guiding trough, and then sticks the optical. The Fiber Optic Association, Inc.
