

Price of Fireproof Cable Tray Brackets in Vertical Shafts

AI Overview

Fireproof vertical cable trays typically range from \$25 to \$150 per meter, depending on material, fire rating, and load capacity.

Price Overview The cost of fireproof cable trays for vertical shafts varies widely based on material, design, and fire-resistance specifications. Common materials include galvanized steel, stainless steel (304/316), aluminum, and FRP (fiber-reinforced plastic), each offering different levels of durability, corrosion resistance, and fire performance.

- Ladder-type, perforated, and wire mesh designs are popular for vertical installations, with ladder trays providing strong support and airflow, while perforated trays balance strength and ventilation.

Galvanized steel vertical trays: \$25–\$60 per meter
Stainless steel (304/316) trays: \$60–\$120 per meter
Aluminum trays: \$40–\$100 per meter
FRP or fire-resistant composite trays: \$50–\$150 per meter

Factors Affecting Price

- Fireproofing and Coatings:** Trays with intumescent coatings, fire-rated wraps, or mineral-insulated (MI) cable compatibility cost more due to enhanced fire resistance.
- Load Capacity:** Heavier-duty trays designed to support large cable bundles or industrial installations are priced higher.
- Customization:** Vertical shafts often require bends, junctions, and prefabricated modular sections, which can increase cost.
- Supplier and Region:** Prices vary by manufacturer and region; Asia-Pacific suppliers often offer lower prices, while North America and Europe may have higher costs due to compliance with local standards.
- Installation Complexity:** Vertical installations may require additional supports, brackets, or scaffolding, which can add to the overall project cost.

Recommendations Confirm the fire rating and compliance with standards such as NFPA 70, IEC 60332, or BS 476. Evaluate material choice based on environmental conditions (humidity, chemical exposure, temperature). Consider modular or prefabr...
