

Price of horizontal up and down bends for cable trays

AI Overview

Horizontal and downward bends in cable trays typically range from \$15 to \$150 per piece, depending on material, size, and type.

Horizontal Bends Horizontal bends allow cable trays to change direction laterally, usually at 90° or other angles, and are essential for navigating around structural obstacles . Common types include:

- Equal welded bends:** Both sides have the same angle, ideal for tight 90° turns in limited space .
- Unequal welded bends:** Different angles on each leg, useful for layouts with uneven space .
- Series bends:** Multiple bends joined for gradual directional changes, reducing stress on cables .

Price range: For standard perforated or solid steel horizontal bends, prices generally range from \$15 to \$80 per piece for small to medium sizes, while larger or heavy-duty bends can cost \$100–\$150 .

Downward (Vertical) Bends Downward bends, also called vertical bends, allow cable trays to descend or change elevation. They are available as inside or outside vertical bends and are used to navigate floors, ceilings, or equipment .

Price range: Similar to horizontal bends, small to medium vertical bends typically cost \$20–\$90, while larger or custom-fabricated bends can reach \$120–\$160 per piece .

Factors Affecting Price

- Material:** Carbon steel, stainless steel, or aluminum; hot-dip galvanized options are more expensive .
- Size and load capacity:** Wider trays or bends supporting heavier cables cost more.
- Manufacturing type:** Welded bends are generally pricier than pre-formed or modular bends.
- Supplier and location:** Prices vary by manufacturer, shipping distance, and order quantity.

Recommendation For accurate pricing, it is best to contact suppliers directly with specifications such as tray width, bend angle, material, and quantity. Suppliers like Jiangsu Holdee Electric Co. and Indian manufacturers provide quotes based on these parameters . Bulk orders often reduc...
