

Router with Fiber Optic Card

AI Overview

Fiber optic routers are designed to handle high-speed internet, multi-gig connections, and provide reliable Wi-Fi coverage for homes and offices. Key Features of Fiber-Ready Routers To fully utilize fiber optic internet, a router should have:

- High-speed capability: Support for at least Gigabit Ethernet (1000 Mbps) to match fiber speeds.
- WAN port for ONT: A dedicated port to connect to the Optical Network Terminal (ONT) that converts fiber signals into data usable by the router.
- Advanced wireless technology: Wi-Fi 6, 6E, or Wi-Fi 7 for faster speeds, better coverage, and reduced latency.
- Multiple Ethernet ports: For wired connections to computers, gaming consoles, or NAS devices.
- Security features: WPA3 encryption, firewalls, and optional subscription-based protection for advanced security.

Top Fiber Optic Routers

- NETGEAR Nighthawk RS700S (Wi-Fi 7)**
 - Max Speed: 10 Gbps
 - Coverage: 3,500 sq. ft.
 - Ports: 8 internal antennas, multi-gig Ethernet
