Global supply chains involve multiple intermediaries pre and post manufacturing where goods and end products are passed between factories, shipping vehicles, pallets, warehouses, and delivery fleets. Their journey is fraught with risk. Logistics is no longer a hidden operational function concerned. It includes requirement for both Storage and the Distribution network and vehicles. In practice the typical distribution network consists of a number of fixed locations (storage facilities) with the distribution between locations carried out either by a company's own transport or very often by. Nothing excludes or limits the liability of BRCGS for death or personal injury caused by its negligence, for fraud or fraudulent misrepresentation or for any matter which it would be illegal for it to exclude or attempt to exclude liability for. The Global Standard for Storage and Distribution.
