

Syria sells fiber optic cables at prices

AI Overview

Fiber optic cable costs in Syria vary widely, with material prices ranging from \$1 to \$6 per foot and installation fees for home or business connections adding significant additional costs. Material Costs Fiber optic cables themselves typically cost \$1 to \$6 per linear foot, depending on the type (single-mode or multi-mode) and fiber strand count. Wholesale bulk purchases can be cheaper, around \$0.09 to \$1.52 per foot, while retail prices for pre-terminated or high-count cables are higher, up to \$6 per foot. Single-mode fiber is generally less expensive per foot than multi-mode fiber but requires more costly equipment for operation. Installation Costs in Syria In Syria, fiber internet installation fees can reach 100,000 Syrian pounds for home connections, in addition to monthly service fees. For example, an 8 Mbps home fiber package starts at 63,000 Syrian pounds per month, while business packages can exceed 600,000 Syrian pounds per month, excluding installation. Costs may vary depending on the city, infrastructure availability, and whether the installation is underground or aerial. Factors Affecting Costs Cable Type: Single-mode vs. multi-mode fiber affects both material and equipment costs. Installation Method: Underground trenching is more expensive than aerial or indoor runs. Geographic Location: Deployment zones in major cities like Damascus, Aleppo, and Homs may have different pricing due to infrastructure rollout priorities. Service Tier: Higher-speed packages or business-grade connections increase both installation and monthly fees. Environmental Durability: Fiber designed to withstand heat, humidity, and mechanical stress may cost more. Summary While the raw cable cost can be estimated at \$1–\$6 per foot, the total cost for a functional fiber optic connection in Syria includes installation fees and monthly service charges, which can be substantial. For a typical home, expect installation around 100,000 Syrian pounds plus monthly fees starting at 63,000 Syrian pounds, while commercial or high-speed connections can be significantly hig...
