

What is a double-trapezoidal cable tray

Overview

A trapezoidal cable tray is a cable tray composed of two longitudinal channels connected to a horizontal support crossbar. These trays have large space and good ventilation performance. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays.
