

What size router should I buy for a 300m fiber optic connection

AI Overview

For a 300 Mbps fiber connection, a dual-band Wi-Fi 5 or Wi-Fi 6 router with at least 1 Gbps WAN/LAN ports is sufficient to fully utilize your internet speed.

Key Considerations

Speed and Wi-Fi Standard: To handle 300 Mbps, your router should support speeds well above your plan to avoid bottlenecks. Dual-band routers with Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) are recommended, as they provide faster throughput and better efficiency for multiple devices. Even a router rated for 1200–1800 Mbps is more than enough for 300 Mbps fiber. **Wired Connections:** Ensure the router has at least one gigabit WAN port and multiple gigabit LAN ports. This allows devices like PCs, gaming consoles, or smart TVs to achieve full fiber speeds via Ethernet. **Coverage and Range:** Consider your home size. Dual-band routers generally provide good coverage for small to medium homes, while larger homes may benefit from mesh systems or routers with multiple antennas for consistent signal throughout the space. **Budget Options:** Routers like the TP-Link Archer A7, NETGEAR Nighthawk R6700, or ASUS RT-AC66U B1 are capable of handling 300 Mbps with reliable coverage and dual-band Wi-Fi. These are cost-effective choices for everyday use. **High-Performance Options:** If you want future-proofing or plan to upgrade to gigabit fiber, routers like the Netgear Nighthawk RS700S (Wi-Fi 7) or TP-Link AX55 (Wi-Fi 6) offer higher speeds, better range, and support for multiple devices simultaneously.

Summary Recommendation

For a 300 Mbps fiber connection, a dual-band Wi-Fi 5 or Wi-Fi 6 router with gigabit ports is sufficient. Choose a router based on your home size, number of devices, and whether you prefer wired or wireless connections. Budget-friendly models like the TP-Link Archer A7 or NETGEAR R6700 are adequate, while high-end options like the Netgear Nighthawk RS700S pr...
